No Room For Chaos

Chaos is your friend !

Developer Notes

Qianhui Zheng
Creating a game from scratch with friends is cool!

Diyan Fu
Creating a game is about not only coding and design but also creativity and cultivating teamwork.

Rui Wang
I really enjoy making the auto mode and the teaching mode!

Wentao He
When developing this game, I learned zen in organizing my everyday life. No room for chaos in my life.

Introduction

A college student, who is overwhelmed by various events in his college life, has the same dream every day. The dream is somehow the metaphor for his everyday life: the rooms of chaos. He needs to regain control over his life. He must overcome numerous obstacles, prevent their anxiety from causing harm, and defeat their inner enemies to restore order and improve their life. The story is not bleak, but rather encouraging. It focuses on the student's struggle with their inner demons. And of course, finally defeating them. Every student, whether experiencing mild or severe anxiety, can feel empathy in this game. The story's main idea is that everyone can conquer their anxiety, find inner peace, and have a fulfilling life.

Highlights & Design Philosophy

Multi-strategy escaping: The major goal is to escape continuous rooms. Choose your own strategy, from chasing speed to battle!
Rogue-like design: Rogue-like design offers a highly replayable experience as players can delve into the storyline behind the game and witness the growth of the main character.
Top-down shooting: This simplifies navigation and exploration, providing a better tactical planning experience.
Action-encouraging mechanism: There are rewards for taking advantage of the game mechanism and punishments for passive gaming strategy.
